Technical Skills

Programming Languages: Java, C, C++, Python

Databases: SQL, Oracle SQL Developer

Data Analysis Tools: Microsoft Power Bi

Web: HTML, JavaScript, CSS, PHP, Laravel framework, Symfony framework, Bootstrap, Angular, React-Native, Ionic, XML

Operating Systems: Windows, Unix, Linux

Other: JSON, Git, Shell, R, Ruby on Rails

Speaking Languages: Spanish (Native Proficiency), English (Full professional proficiency)

Education

Bachelor of Computer Science

September 2017 – June 2022

Universidad de Las Palmas de Gran Canaria, Spain

- Specialized on **Information Technologies**

- **Relevant Modules:** Mathematical analysis, Introduction to computer science, Databases I-II, Programming I-IV, Computational mathematics, Fundamentals of Intelligent Systems, Network Services and Security, Computer networks, Operating Systems Administration, Computer Architecture, Agile Development Methodologies, Software Engineering I-II, Fundamentals of Information Systems Technologies, Software technology for Information Systems Development, Technological infrastructures for information systems, Web application development I-II, Administration and security technologies

Leaving Certificate, St. Mogue's College, Cavan, Ireland

September 2015 – June 2017

Work Experience

Infrastructure Optimization Project at Telefónica España

September 2024- Now

- Acted as a project coordinator within an initiative to identify, analyze, and decommission unused or underutilized infrastructure.
- Analyzed infrastructure, licensing, power consumption, and fiscal data to quantify cost-saving opportunities.
- Used Power BI to consolidate data from multiple sources, creating dashboards and KPIs to track progress, savings, and optimization impact.

Change & Incident Management at Telefónica España

December 2022 – September 2024

- Managed and analyzed change and incident tickets using BMC ITSM, supporting the stability of the company's internal Telco architecture.
- Proactively designed and developed an internal incident referencing web application, improving data quality and enabling application availability tracking and service reliability KPIs.
- Built Power BI dashboards to analyze incident trends, change impact, availability metrics, and operational performance.

Improvement of digital infrastructure at Asesoría Lin

January 2022 – June 2022

- Helped improved the digital infrastructure at a consultant's office by adapting it to remote work with the use of VPN networking.

- Migrated programs and management to local server within the office running Windows server.
- Improved security in already existing machines by setting up new passwords, improving firewall and user restrictions.

Web Developer Intern at TcaTik

September 2021 - December 2021

- Worked on the company's developers' team.
- Contributed to the completion of several web e-commerce projects using the Laravel framework for the front end.
- Designed and assisted in the deployment of the backend MySQL database.
- Helped locate problems and bugs on the local and remote testing with the use of Chrome Developer Tools, and later contributed to solve said problems.

Individual/University Projects

Recipe app for traditional food

2022

- End of degree project. Created an app with a React Native front end designed to act as a recipe book focused on traditional grandma's food.
- Backend of the app created with Symfony framework for PHP able to handle requests and responses.

ToDo List

2021

- Created a to do list in Angular that keeps track of tasks and the state they are on, and can sort them by several criteria.

Vaccine Appointment App

2021

- Produced a minimal viable product with a team of 4 employing agile methodology during a period of 4 sprints. The final product was an Angular app which served to request vaccine appointments during the COVID pandemic.

Cluster Deployment

2020

- University project where I worked in a team of 2 to build and maintain a cluster infrastructure with Linux virtual machines and later deploy a Moodle high availability service in an Apache web server.
